Pivot Point Cable Ties feature an advanced locking mechanism which offers low insertion with high pull-out force. The stepped design locks against the strap's serrations for superior locking power.

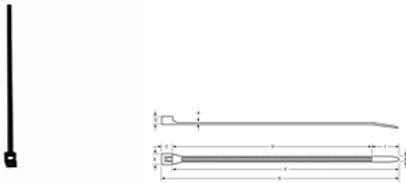

The strap has finely molded serrations for total adjustability within a fastening range. The elimination of ejector pin marks along the length of the strap promotes smooth pull-thru. Also, the strap has rounded edges on the outer rails to enhance low drag coefficient and minimum surface abrasion.

The tail (inset) is a tapered, bent tip with ribbed finger grips. These features encourage non-slip insertion and fast assembly.

The head has been designed with a low profile for an attractive appearance. This also reduces snagging in tight spaces. With gusset-style reinforcement, the neck is strengthened where the head joins the strap.

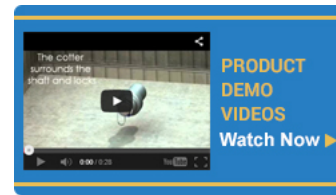

Dimensions of the cable ties may vary slightly depending upon the environment in which they are stored. In a environment with a high relative humidity (RH), nylon ties will absorb moisture and the dimensions will slightly increase. Conversely, if the ties are kept in an environment with low RH, the dimensions will slightly decrease. Molding conditions and post-mold shrinkage could also affect the dimensions.

Sold in either 50, 100 or 1,000 piece bags. Pricing is per bag.
